AccessData® Introduces CIRT

The only cyber security solution integrating network analysis, host analysis and data auditing into a single platform.

LINDON, UT, July 30, 2012: Today, Tim Leehealey, AccessData CEO, introduced Cyber Intelligence and Response Technology (CIRT). CIRT is the first of its kind solution to incorporate network, host, malware, large-scale data auditing and remediation into a single platform. No other product offers Fortune 500 companies, law enforcement, military and Department of Defense organizations as robust a cyber security framework as CIRT.

Previewed at Black Hat USA 2012 conference in Las Vegas, CIRT made an impact with attendees due to its ease of use, automated functionality, and integrated framework. Erika Lee, AccessData Director of Product Development for CIRT, said cyber security experts were pleased to find a solution joining all the necessary tools for incident management into single platform. Ms. Lee advised, "The Committee for National Security Systems (CNSS) states the traditional six-step model for incident management is insufficient because that model depends on phases and events triggering activity in subsequent phases. CIRT overcomes this deficiency, providing a more robust security solution."

Ms. Lee further explained CIRT accomplishes this by integrating the network, host, malware, large-scale data auditing and remediation into a single solution. This allows CIRT to continuously monitor removable devices (like thumb drives), network traffic, unauthorized access, and monitor assets that are not logged into a network. In addition, AccessData's CIRT platform monitors for data leaks and provides for threat detection and analysis.

Jason Mical, Director of Network Forensics at AccessData, warns, "This is an age of targeted threats like Flame and Stuxnet. We have moved beyond simple malware attacks to cyber vandalism and cyber espionage. Cyber attacks now threaten infrastructure, as well as data." As AccessData provides the only product that merges all necessary tools for cyber security incident management into a single platform, it is critical corporations and government agencies secure their data operations with CIRT.

About AccessData Group:

AccessData Group has pioneered digital investigations and litigation support for 25 years. Its family of stand-alone and enterprise-class solutions, including FTK, SilentRunner, Summation and the CIRT security framework, enable digital investigations of any kind, including computer forensics, incident response, e-discovery, legal review and compliance auditing. More than 130,000 users in law enforcement, government agencies, corporations and law firms worldwide rely on AccessData software solutions and its premier digital investigation and hosted review services. AccessData is also a leading provider of digital forensics and litigation support training and certification.
